#### **DETAILED ACTION**

### Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

34 مدمة 43 Claims 33 are rejected under 35 U.S.C. 102(b) as being anticipated by Hagedon et al., (US Pat 5,405,000).

With respect to claim 33, Hagedon discloses a packaging assembly comprising a first frame member (Hagedon Fig 8 ref 54) having first and second free edges, a second frame member (ref 53) having third and fourth free edges, a first retention member (Fig 10 ref 51) extending between the first and second free edges and comprising a sheet material, a second retention member (not labeled but see lower portion of ref 51 below product, ref 52) extending between the third and fourth free edges and comprising a sheet material, the first and second frame members being configured to nest with each other (at ref 65 and 69).

With respect to claim 34, Hagedon discloses that the first and second retention members are substantially resilient (i.e. ref 51 is made of plastic and is placed in tension when the case/frame closes), the first and second frame members being substantially rigid (Fig 10 generally).

With respect to claim 43, Hagedon disclose that the first frame member comprises first and second peripherally extending structures supporting the first and

Art Unit: 3728

second free edges (Fig 8 ref 69), respectively, the second frame member comprising third and fourth peripherally extending structures supporting the third and fourth free edges (ref 65), respectively.

### Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

- 1. Determining the scope and contents of the prior art.
- 2. Ascertaining the differences between the prior art and the claims at issue.
- 3. Resolving the level of ordinary skill in the pertinent art.
- 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claims 35,37,44 and 46 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hagedon et al., (US Pat 5,405,000) as applied to claims 33 and 43 above and further in view of Warburton (US Pat 5,046,659).

With respect to claims 35,37 and 44, Hagedon discloses all the limitations of the claim (including portions extending longitudinally from the first and second free edges and walls extending from the third and fourth free edges) except that the first frame member includes first and second tapered portions extending longitudinally from the first and second free edges, respectively, and the second frame member includes firs and

Art Unit: 3728

second inclined walls extending from the third and fourth free edges. However, Warburton discloses first and second tapered portions extending longitudinally from the first and second free edges (Warburton Fig 5 ref 40 and 41; see also Fig 7 and 7a at ref 40c and 40d) and first and second inclined walls extending from the third and fourth free edges (Fig 5 ref 41'; see also Fig 7 and 7a ref 41a',c',d'). Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the longitudinally extending portions and walls of Hagedon to make them tapered and inclined, as taught by Warburton, for the purpose of easier and more secure latching engagement (column 4, lines 5-8).

With respect to claim 46, it would have been an obvious matter of design choice to have the peripherally extending structures triangular in cross section as opposed to rectangular, since such a modification would have involved a mere change in the shape of a component. A change in shape is generally recognized as being within the level of ordinary skill in the art. In re Dailey 149 USPQ 47.

Claims 36,38-41 and 45 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hagedon et al., (US Pat 5,405,000) in view of Warburton (US Pat 5,046,659).

With respect to claim 36, Hagedon discloses a packaging assembly comprising a first frame member (Hagedon Fig 8 ref 54) having first and second free edges, a second frame member (ref 53) having third and fourth free edges, a first retention member (Fig 10 ref 51) extending between the first and second free edges and comprising a sheet material, a second retention member (not labeled but see lower portion of ref 51 below

Art Unit: 3728

product, ref 52) extending between the third and fourth free edges and comprising a sheet material, the first and second frame members being configured to nest with each other (at ref 65 and 69). Hagedon also discloses a first portion extending from the first free edge (Fig 8 ref 69), a first wall (65) extending from the third free edge and that the first portion is configured to receive the first wall (Fig 10 at ref 65 and 69). Hagedon does not disclose that the first portion is tapered or that the first wall is inclined. However, Warburton discloses latching means including a first tapered portion and a first inclined wall, both configured to receive each other (Warburton Fig 7 and 7a). Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the first portion and first wall of Hagedon to make the portion tapered and the wall inclined, as taught by Warburton, for the purpose of easier and more secure latching engagement (column 4, lines 5-8).

With respect to claim 38, Hagedon discloses all the limitations of the claim except that each of the first and second free edges including tapered portions disposed at opposite longitudinal ends thereof, and wherein the assembly additionally comprises third and fourth inclined walls supporting the third and fourth free edges, respectively the tapered portions being configured to receive the inclined walls in nesting engagement. However, Warburton discloses first and second tapered portions extending longitudinally from the first and second free edges (Warburton Fig 5 ref 40 and 41; see also Fig 7 and 7a at ref 40c and 40d) and third and fourth inclined walls extending from the third and fourth free edges (Fig 5 ref 41'; see also Fig 7 and 7a ref 41a',c',d'). Therefore, it would have been obvious to one having ordinary skill in the art

Art Unit: 3728

at the time the invention was made to modify the longitudinally extending portions and walls of Hagedon to make them tapered and inclined, as taught by Warburton, for the purpose of easier and more secure latching engagement (column 4, lines 5-8).

With respect to claim 39, Hagedon discloses that at least one of the tapered portions and the inclined walls are configured such that the first and second retention members are deflected inwardly when the tapered portions and the inclined walls are nested (Hagedon column 4, lines 40-49; see also column 6, lines 11-13).

With respect to claim 40, Hagedon discloses that a first recessed area (Hagedon fig 8 ref 58) of the first frame member disposed between the first and second free edges and a second recessed area (Fig 10 not labeled but see open interior below ref 51) of the second frame member disposed between the third and fourth free edges.

With respect to claim 41, Hagedon discloses that the first and second retention members are deflected toward the first and second recessed areas, respectively, when the tapered portions and the inclined walls are nested (Fig 10 generally).

With respect to claim 45, Hagedon discloses a packaging assembly comprising a first frame member having first and second free edges, a second frame member having third and fourth free edges, a first retention member extending between the first and second free edges and comprising a sheet material, a second retention member extending between the third and fourth free edges and comprising a sheet material, the first and second frame members being configured to nest with each other, wherein the first frame member comprises first and second peripherally extending structures supporting the first and second free edges, respectively, the second frame member

Art Unit: 3728

comprising third and fourth peripherally extending structures supporting third and fourth free edges, respectively (see anticipation rejection of claims 33 and 43 above). Hagedon does not disclose that the assembly additionally comprises tapered portions formed on the opposite ends of each of the first and second free edges, and at least first and second inclined walls forming a portion of the third and fourth peripherally extending structures, respectively, and wherein the tapered portions extend along a first angle of inclination, the first and second inclined walls extending along a second angle of inclination that is approximately equal to the first angle of inclination. However, Warburton discloses tapered portions (at the peripherally extending structures) formed on the opposite ends of each of the first and second free edges (Fig 5,7,7a at ref 40) and at least first and second inclined walls (at the other peripherally extending structures) forming a portion of the third and fourth peripherally extending structures (at ref 41'), respectively, and wherein the tapered portions extend along a first angle of inclination (40d), the first and second inclined walls extending along a second angle of inclination (41d') that is approximately equal to the first angle of inclination. Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the peripherally extending portions and walls of Hagedon to make them tapered and inclined, as taught by Warburton, for the purpose of easier and more secure latching engagement (column 4, lines 5-8).

## Response to Arguments

Applicant's arguments with respect to claims 33-41 and 43-46 have been considered but are moot in view of the new ground(s) of rejection.

Art Unit: 3728

#### Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. See PTO-892.

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Steven B. Pollicoff whose telephone number is (571)272-7818. The examiner can normally be reached on M-F: 7:30A.M.-4:00P.M.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Mickey Yu can be reached on (571)272-4562. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300. Information regarding the status of an application may be obtained from the Patent
